

Hands-Free Reading Guide

A companion guide for Kindle Click owners — read in comfort, without holding your Kindle up for hours.

1. Set Up Your Remote

Pair Kindle Click over Bluetooth in your Kindle settings. Assign the two large round buttons to page forward and page back, in the way that suits your left or right hand. Test both buttons, then test the side buttons for brightness, before your first long reading session.

2. Find Your Comfort Spot

Prop your Kindle on a pillow, a stand, or a folded blanket, so the screen faces you at eye level. Loop the woven wrist lanyard round your wrist. Rest the remote on the bed, a chair arm, or a side table, within easy reach.

3. Read in Bed Without Strain

Keep the room softly lit and let the remote handle brightness: dim the screen at night with the side buttons instead of opening menus. Press both side buttons together to put the Kindle to sleep when you are done. Take a short break every 30 to 45 minutes, stretch your hands and neck, and change position.

4. Build a Nightly Reading Habit

Pick a fixed time, such as 20 minutes before sleep. Keep the remote and Kindle in the same place each night, so the habit starts itself. Choose one book at a time, and set a small daily page goal. Small, steady steps beat grand plans that fade in a week.

5. Before You Buy: The Compatibility Check

Kindle Click works only with Kindle models released from 2024 onward, including the 2024 Paperwhite and Colorsoft and the full 2026 lineup. It does not work with pre-2024 models, including Kindle (2022) and Paperwhite 11th generation. Check your model year first. Also note: no USB-C cable or adapter is in the box, so keep a spare cable ready, and remember there is no subscription — you pay \$34.99 once.

Quick Checklist

Step	Done?
Pair and assign the buttons	
Prop the Kindle at eye level	
Loop on the wrist lanyard	
Set brightness for night reading	
Pick a nightly page goal
