LED Wall Art Layout & Setup Quick Guide

An exclusive bonus from **ZoxDeal** — companion to the RGB Smart Hexagonal Wall Lamp review (8-pack, TouCloud Store).

---

1. Plan your layout on the floor first

Never stick panels to the wall one by one. Lay all 8 panels on the floor and try 2–3 arrangements — a tight honeycomb cluster looks best above a desk or bed. Take a phone photo of your favorite layout so you can rebuild it on the wall exactly.

2. Connect gently — the fiddly part

Buyers report the connectors can be fiddly ("you have to play around to get them to connect"). Line up the edge connectors squarely and press firmly but evenly — do not force or twist. If a panel will not seat, rotate it 60 degrees and try the next edge. Confirm every panel lights before mounting.

3. Mount securely

Clean the wall with a dry cloth first. Mount the panels in your photographed order, pressing each one firmly. Panels are lightweight USB-powered units, so standard adhesive mounting works — but test placement on a small hidden spot first if you rent, since removal may mark delicate paint.

4. Set up the MeRGBW app

- Install the MeRGBW app on your phone and enable Bluetooth.
- Power the panels via any USB 5V source — a wall charger, laptop port, or power bank.
- Pair the controller in the app; no hub or Wi-Fi setup is needed.
- Explore the preset scenes first, then save your favorites for one-tap access.

5. Dial in music-sync mode

Open music rhythm mode in the app and play music at normal volume. The controller listens to ambient room sound — no cable needed. For the strongest effect, keep the controller clear of furniture and put the music source roughly in the middle of the room.

6. Troubleshoot like a pro

- **Visible LED dots:** the most common complaint — the plastic diffuser is not fully opaque. Soften the effect by choosing lower brightness, warmer colors, or viewing from 6+ feet away.
- **A panel will not light:** unseat and reconnect it; reseat the USB power plug too.

- **Panels look smaller than expected:** that is a sizing perception issue, not a defect — measure your wall area against the listed panel dimensions before remounting.
- **One part arrives crooked or damaged:** inspect all 8 panels on arrival and use AliExpress 90-day free returns if anything is defective.
- **Colors wash out in daylight:** these panels shine in dim or evening light — that is when they earn their keep.

Quick buyer checklist

- 8 panels build a cluster, not a full wall — plan for the space above a desk or bed.
- The $16.20 deal price is the real price; ignore the crossed-out $93.81 anchor.
- Free US shipping, fastest 7 days; 90-day free returns on defects.
- USB 5V power — no plug or voltage worries in the US.

This guide is an original companion bonus created by ZoxDeal. It is provided as-is for setup assistance.
